

Advanced Android Development

review of gReporter open-source project:
GPS, Audio / Photo Capture, SQLite, HTTP File Upload and more!

Nathan Freitas, Oliver+Coady
nathan@olivercoady.com

Android Platform Basics

Platform Features

- Application framework enabling reuse and replacement of components
- Dalvik virtual machine optimized for mobile devices
- Integrated browser based on the open source WebKit engine
- Optimized graphics powered by a custom 2D graphics library; 3D graphics based on the OpenGL ES 1.0 specification (hardware acceleration optional)
- SQLite for structured data storage
- Media support for common audio, video, and still image formats (MPEG4, H.264, MP3, AAC, AMR, JPG, PNG, GIF)
- GSM Telephony (hardware dependent)
- Bluetooth, EDGE, 3G, and WiFi (hardware dependent)
- Camera, GPS, compass, and accelerometer (hardware dependent)
- Rich development environment including a device emulator, tools for debugging, memory and performance profiling, and a plugin for the Eclipse IDE

}
```

Android Application Examples

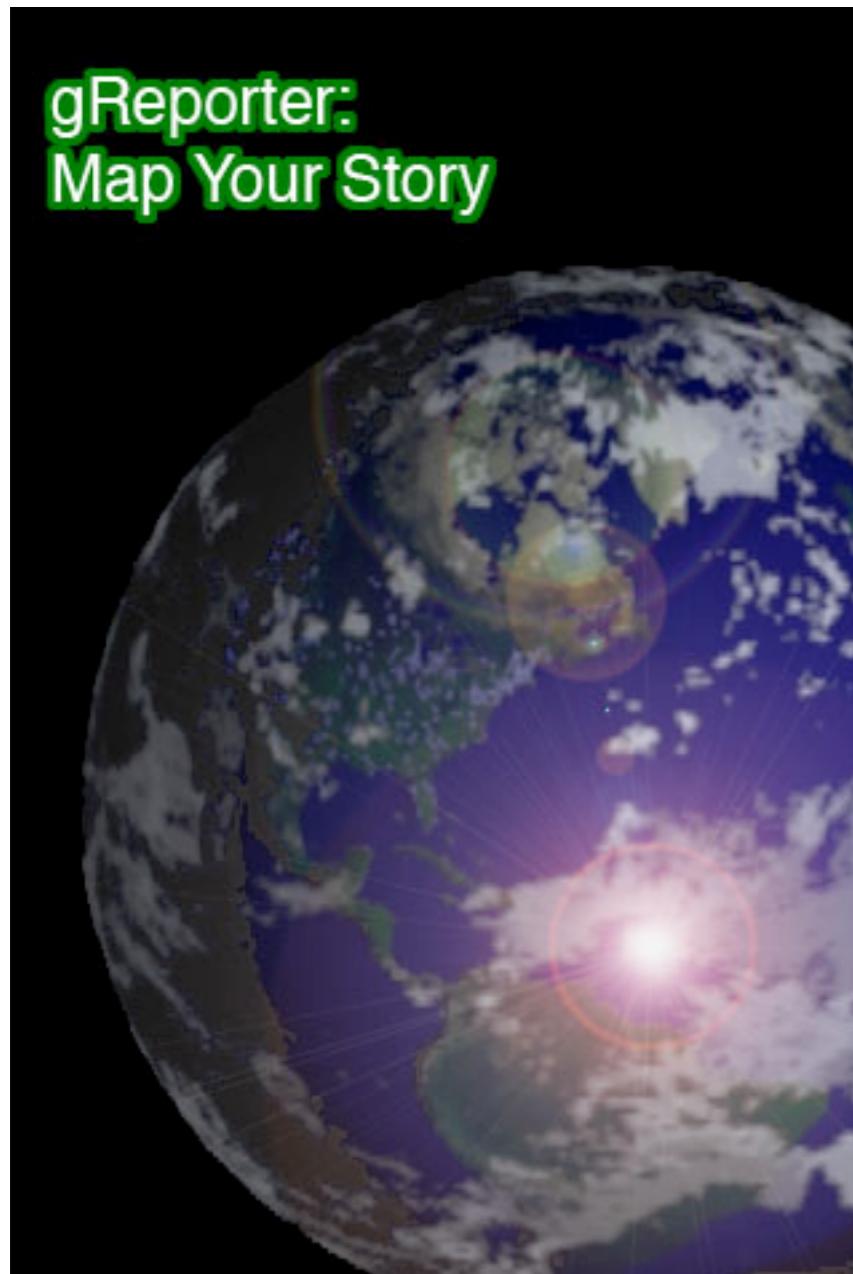

gReporter:
open-source
geotagging
media capture
report client

for the Android Platform

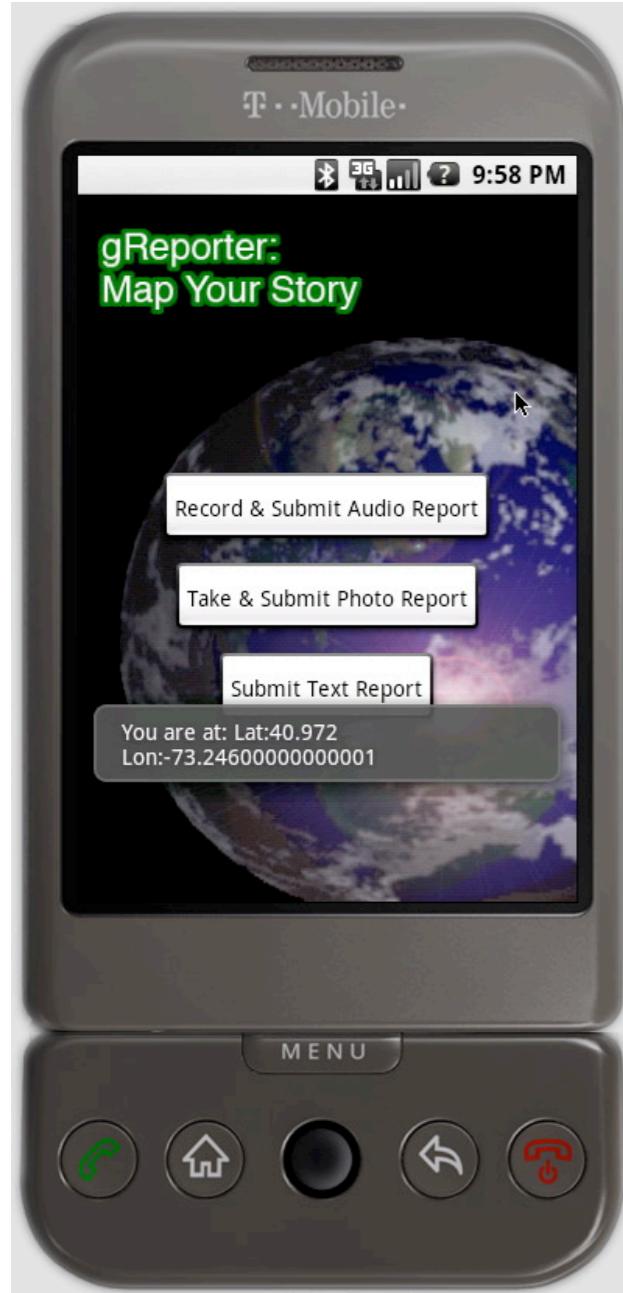

<http://openideals.com/greporter>

gReporter: what is it?

- Android client application
- Captures text, audio and photo
- Finds device location via GPS or Network
- Submits captured data + location coordinates to any configured server via HTTP
- Displays page of submitted reports or other info
- Released under Apache License

Main Menu / LocationManager

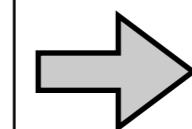

- Three Button Main Menu
- Activates LocationManager for GPS or Network-based location lookup
- Uses a single PNG background image
- Uses “toast” dialogs to display updated location information from callback

Main Menu / LocationManager

Locator.xml

```
<Button android:id="@+id	btnSubmitAudio"
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:layout_alignParentRight="true"
        android:layout_gravity="center"
        android:text="Record & Submit Audio Report"
        android:padding="10sp"/>
```

```
((Button) findViewById(R.id.btnSubmitAudio)).setOnItemClickListener(this);
```

LocationFormActivity.java

```
public void startGPS ()
{
    //---use the LocationManager class to obtain GPS locations---
    if (lm == null)
    {
        lm = (LocationManager) getSystemService(Context.LOCATION_SERVICE);

        locationListener = new MyLocationListener();

        if (lm.isProviderEnabled(LocationManager.GPS_PROVIDER))
        {
            Log.i(TAG, "starting up GPS location provider...");
            lm.requestLocationUpdates(
                LocationManager.GPS_PROVIDER,
                LOCATION_UPDATE_TIME, LOCATION_UPDATE_DISTANCE, locationListener);

            currentLocation = lm.getLastKnownLocation(LocationManager.GPS_PROVIDER);
            updateLocation (currentLocation);
        }

        if (lm.isProviderEnabled(LocationManager.NETWORK_PROVIDER))
        {
            ...
        }
    }
}
```

Settings and Text Report Forms

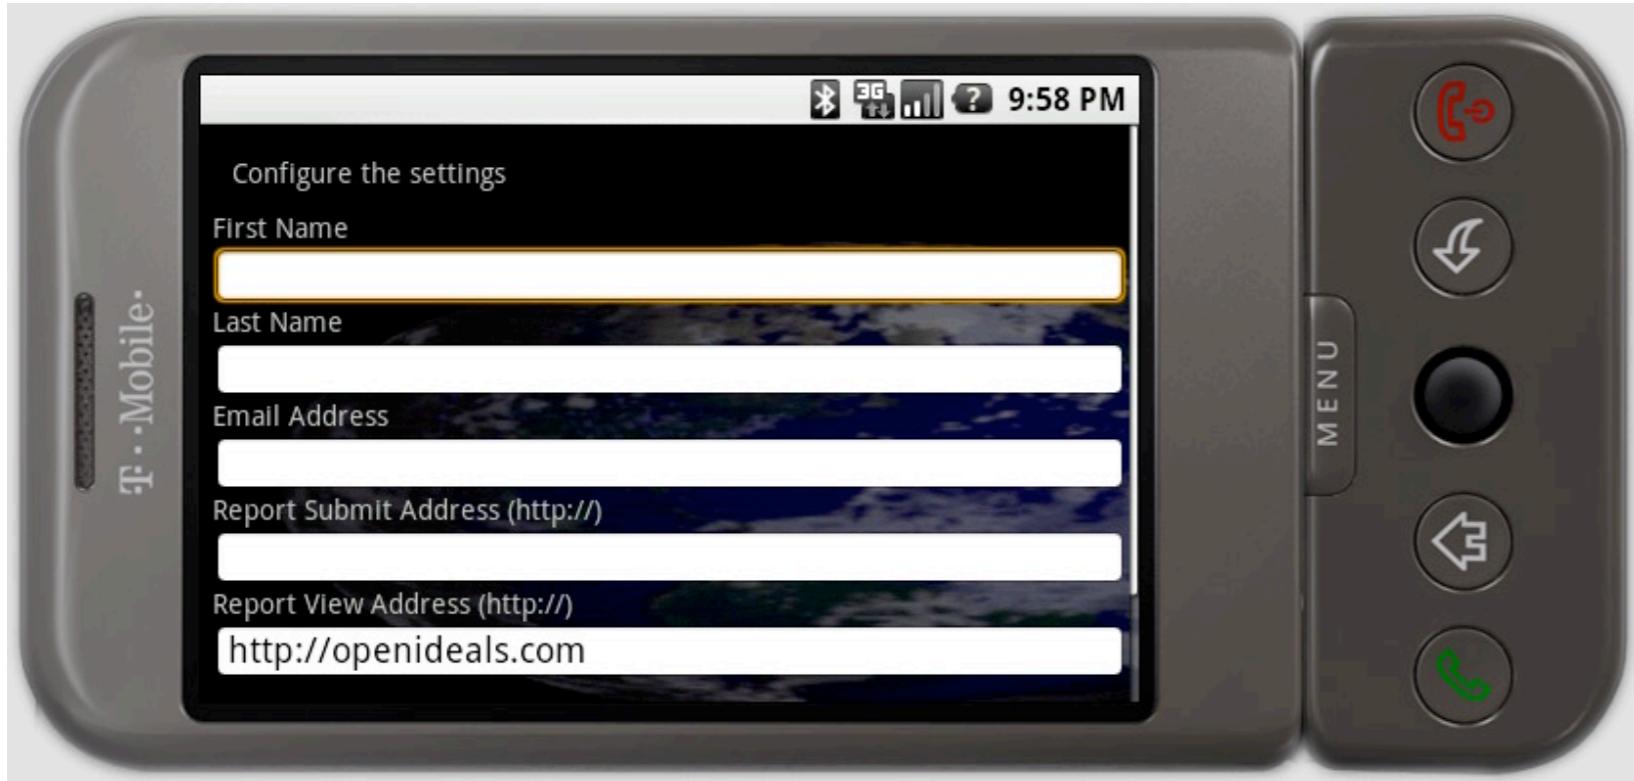

- Basic forms with text field, input boxes, drop-downs are all possible

- Values of forms are either stored in local sqlite database or submitted to the server

- on G1 form editing is always in landscape / horizontal mode

Settings “Person” Form

personform.xml

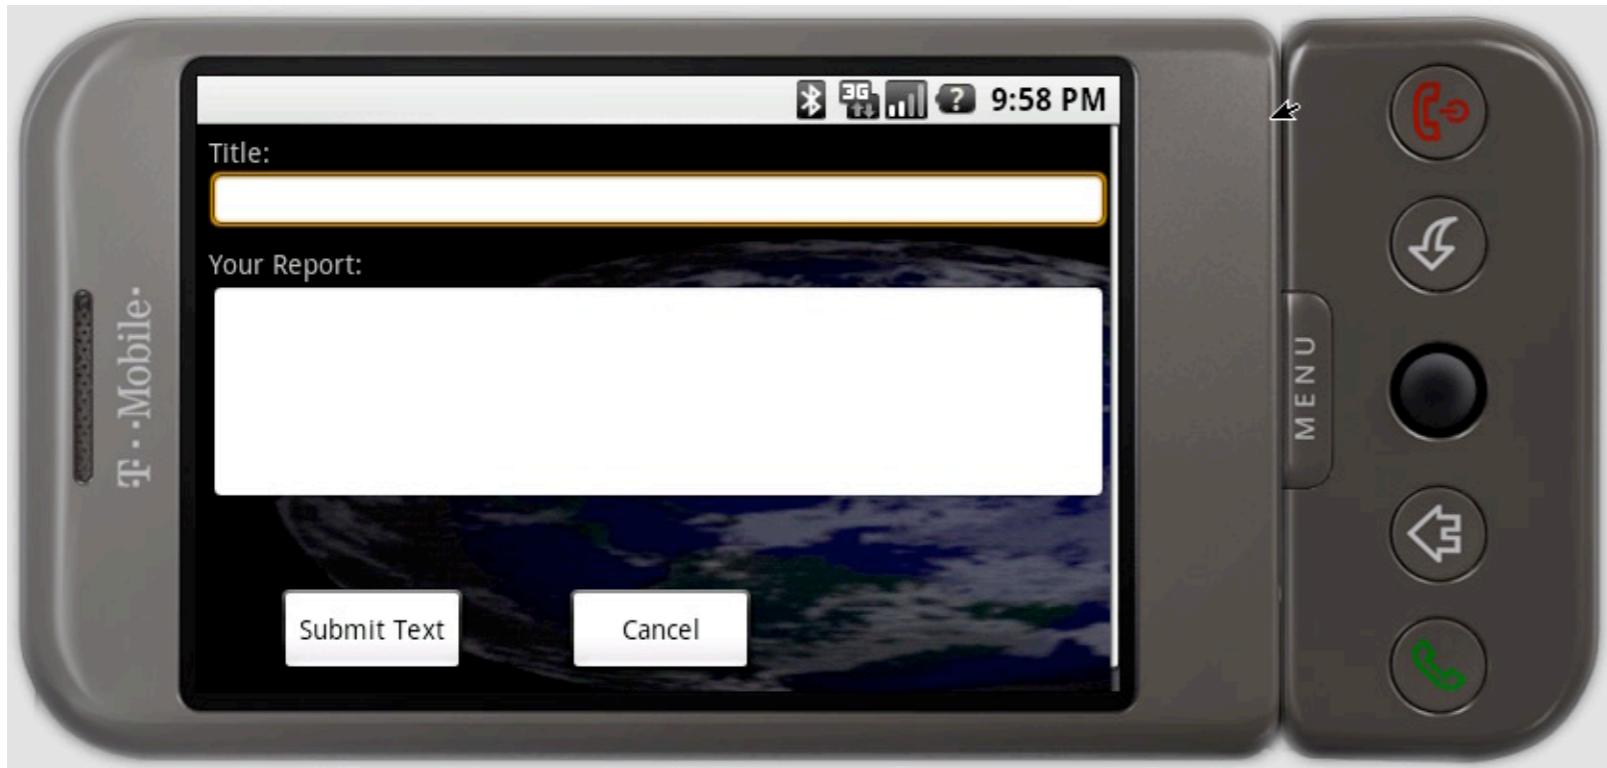

```
<TextView android:id="@+id/labelFirstName"
    android:layout_width="wrap_content"
    android:layout_height="wrap_content"
    android:text="First Name"/>

<EditText android:id="@+id/entryFirstName"
    android:layout_width="fill_parent"
    android:layout_height="wrap_content"
    android:background="@android:drawable/editbox_background"
    />
```

PersonFormActivity.java

```
if (event.getId()==R.id.btnReportFormSubmit)
{
String firstname = ((TextView)findViewById(R.id.entryFirstName)).getText().toString();
String lastname = ((TextView)findViewById(R.id.entryLastName)).getText().toString();
String email = ((TextView)findViewById(R.id.entryEmail)).getText().toString();
String submitUrl = ((TextView)findViewById(R.id.entrySubmitUrl)).getText().toString();
String displayUrl = ((TextView)findViewById(R.id.entryViewUrl)).getText().toString();
}
```

Text Report

reportform.xml

```
<TextView android:id="@+id/labelReport"
    android:layout_width="wrap_content"
    android:layout_height="wrap_content"
        android:paddingTop="10dp"
    android:text="Your Report:"/>

<EditText android:id="@+id/entryReport"
    android:layout_width="fill_parent"
    android:layout_height="wrap_content"
    android:background="@android:drawable/editbox_background"
    android:lines="5"
    />
```

```
public void onClick(View v) {
    if (v.getId()==R.id.btnReportFormSubmit)
    {
        progressDialog = ProgressDialog.show(ReportFormActivity.this,
            "Submitting Report",
            "Please wait...",
            true);

        Handler handler = new Handler();

        handler.postDelayed(this, 1000);
    }
    else if (v.getId()==R.id.btnReportFormCancel)
    {
        showMain ();
    }
}
```

ReportFormActivity.java

```
String reportTitle =
((TextView)findViewById(R.id.entryTitle)).getText().toString();
String reportText =
((TextView)findViewById(R.id.entryReport)).getText().toString();

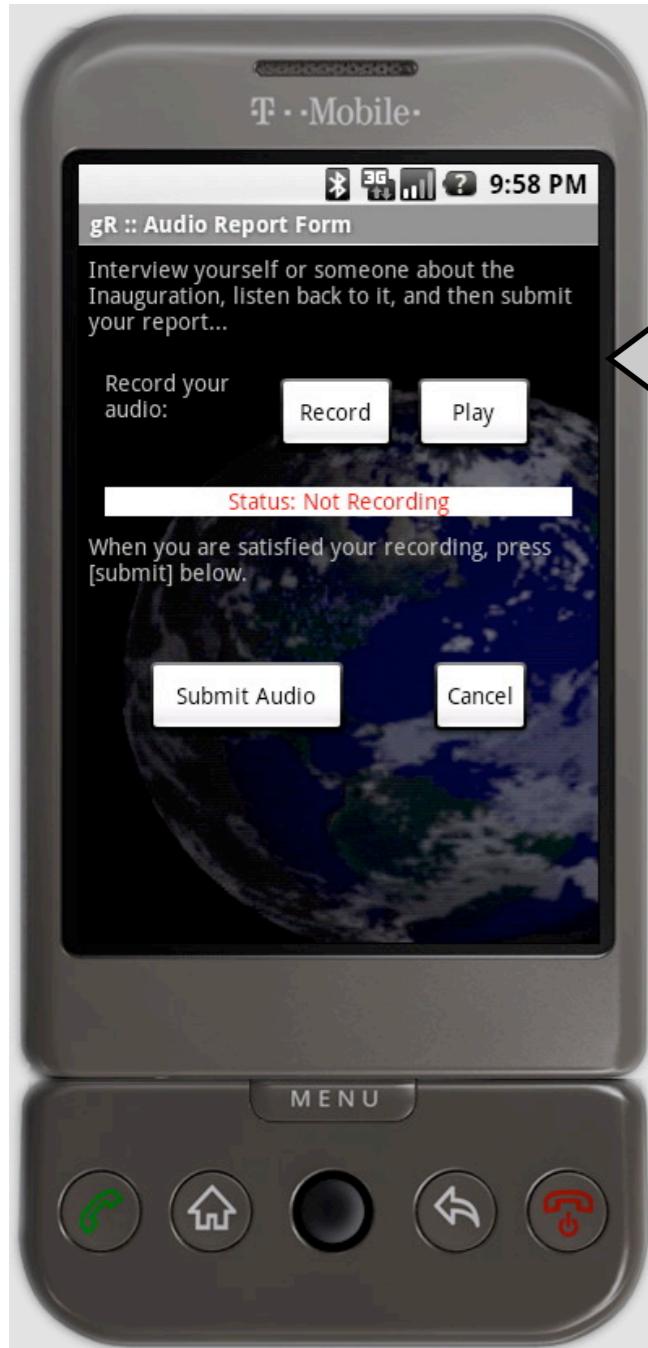

boolean reportAccepted =
Reporter.submitTextReport(reportTitle, reportText);
```

Audio Recording / File System

- Audio recording through built-in device microphone in 3GP format
- Captured to SD card storage
- Playback review / re-record overwrite
- Audio upload to server via HTTP Post

Audio Recording / File System

reportaudioform.xml

```
<ScrollView xmlns:android="http://schemas.android.com/apk/res/android"
    android:id="@+id/scrollReportForm" android:layout_width="fill_parent"
    android:layout_height="fill_parent"
    android:background="@drawable/bg">

    <LinearLayout android:id="@+id/layoutReportForm" android:label="Text Report"
        android:layout_width="fill_parent" android:layout_height="wrap_content"
        android:orientation="vertical" android:gravity="top" android:padding="6.0sp">

        <TextView android:id="@+id/labelPhotoHeader" android:layout_width="fill_parent"
            android:layout_height="wrap_content" android:text="..."/>

        <RelativeLayout
            xmlns:android="http://schemas.android.com/apk/res/android"
            android:layout_width="fill_parent" android:layout_height="wrap_content"
            android:padding="10dp" android:layout_marginTop="10px">
```

```
private void setStatus (String status)
{
    ((TextView)findViewById(R.id.labelAudioStatus)).setText(status);
}
```

```
Toast.makeText(getApplicationContext(), "Thank you. Your report has been accepted!",
Toast.LENGTH_LONG).show();
```

Audio Recording / File System (cont'd)

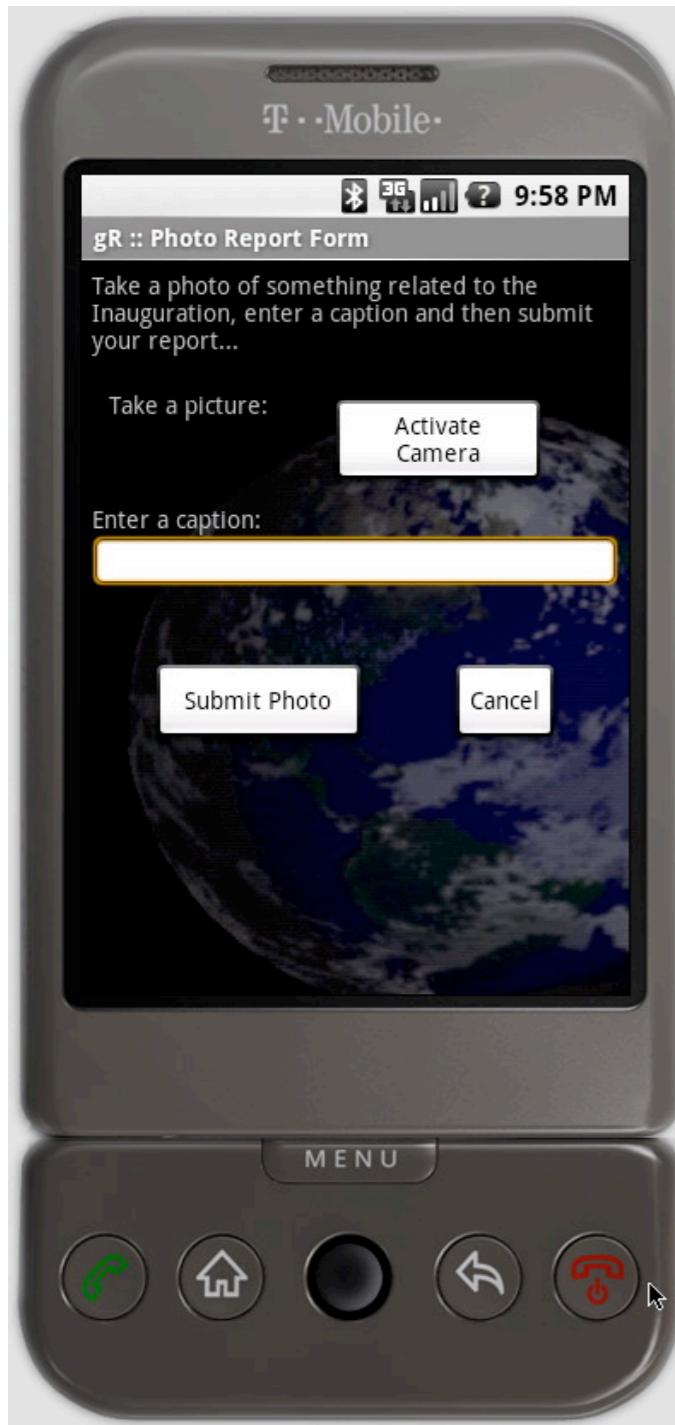

```
private String startRecording (String filename)
{
    setStatus ("Recording...");
    ((TextView)findViewById(R.id.btnRecordAudio)).setText("Stop");
    String path = null;
    if (currentAudioFile != null)
    {
        path = currentAudioFile;
    }
    else
    {
        path = "/sdcard/" + filename + file_ext;
    }

    mRecorder = new MediaRecorder();
    mRecorder.set AudioSource(MediaRecorder.AudioSource.MIC);
    mRecorder.setOutputFormat(MediaRecorder.OutputFormat.THREE_GPP);
    mRecorder.setAudioEncoder(MediaRecorder.AudioEncoder.AMR_NB);
    mRecorder.setOutputFile(path);
    mRecorder.prepare();
    mRecorder.start();
    return path;
}

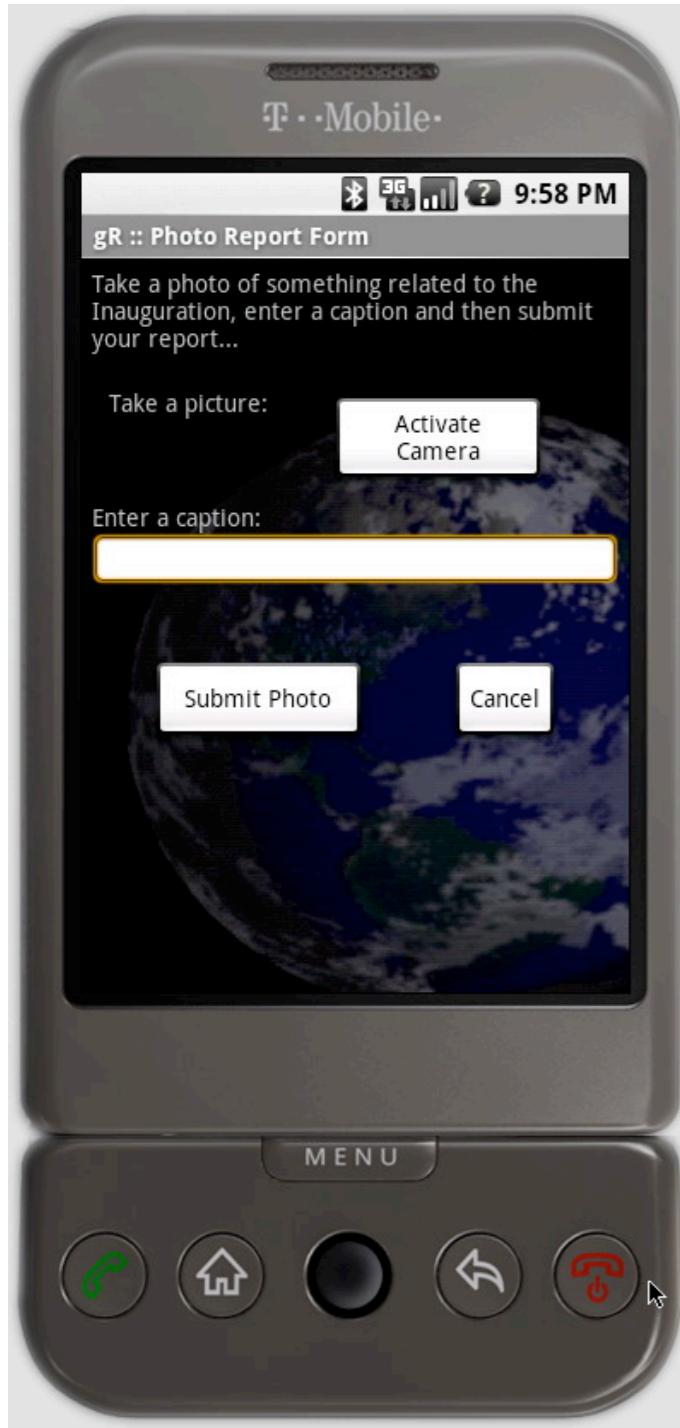

private void playRecording (String path)
{
    setStatus ("Playing...");
    try
    {
        mMediaPlayer = new MediaPlayer();
        mMediaPlayer.setDataSource(path);
        mMediaPlayer.prepare();
        mMediaPlayer.start();
    }
    catch (IOException e)
    {
        e.printStackTrace();
    }
}
```

Photo Capture & Display

- Capture of photo from built-in camera
- Captured in JPEG format at screen-size resolution (480x320)
- Compressed from 3MP format on capture
- Stored on local SD card (also accessible via USB mount or card reader)
- Upload to server via HTTP Post

Photo Capture & Display

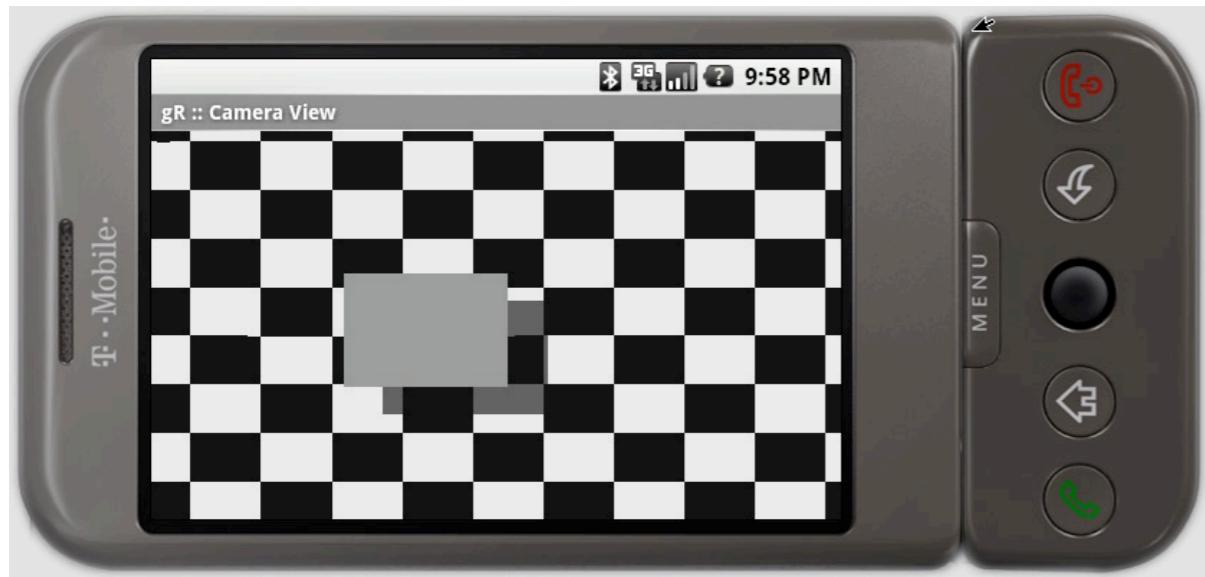

reportphotoform.xml

```
<ImageView android:id="@+id/previewphoto" android:layout_width="wrap_content"  
          android:layout_height="wrap_content"  
          android:layout_gravity="top"/>
```

PhotoFormActivity

```
/** Called when the activity is first created. */  
@Override  
public void onCreate(Bundle savedInstanceState) {  
    super.onCreate(savedInstanceState);  
  
    currentPhotoPath = this.getIntent().getStringExtra("photofile");  
  
    setContentView(R.layout.reportphotoform);  
  
    ((Button)findViewById(R.id.btnTakePicture)).setOnClickListener(this);  
    ((Button)findViewById(R.id.btnReportFormSubmit)).setOnClickListener(this);  
    ((Button)findViewById(R.id.btnReportFormCancel)).setOnClickListener(this);  
  
    if (currentPhotoPath != null)  
    {  
        Toast.makeText(getApplicationContext(), "Ready to send photo: " + currentPhotoPath,  
        Toast.LENGTH_LONG).show();  
  
        ((ImageView)findViewById(R.id.previewphoto)).setImageURI(Uri.parse(currentPhotoPath));  
    }  
}
